

FOR IMMEDIATE RELEASE

BioNano Genomics Secures \$10 Million in Series B-1 Financing

*Battelle Ventures, Domain Associates, Gund Investment Corp.,
and Innovation Valley Partners participate*

SAN DIEGO – June 29, 2012 – [BioNano Genomics, Inc.](#) has raised \$10 million in a Series B-1 round of equity financing. Existing investors Battelle Ventures, Domain Associates and Gund Investment Corporation participated in the round. BioNano Genomics combines the latest in biotech and nanotech to deliver an altogether better way of gaining a fully informed understanding of genomes.

“This financing comes at a pivotal time for the company as we complete product development in advance of the company’s commercial launch, anticipated by the end of 2012,” said R. Erik Holmlin, Ph.D., President and Chief Executive Officer of BioNano Genomics.

The Company’s unique genomics platform has been designed to give researchers insight into how the different components of a genome are organized. This approach should provide the context that has been missing in efforts to make the link between phenotypic variation and genomic variation.

“The company has been making excellent progress toward commercialization,” added BioNano Genomics Board Chair Tracy Warren, who is a general partner at Battelle Ventures. “This funding round will enable us to accelerate taking our platform for genomics to market.”

About BioNano Genomics

Headquartered in San Diego, BioNano Genomics is delivering an altogether better way of gaining a fully informed understanding of genomes. The Company’s platform provides researchers and clinicians the most comprehensive, organized and actionable picture of a genome with unprecedented insights into how the individual components of genomes are ordered, arranged, and interact with each other. BioNano Genomics works with institutions in life science, translational research, molecular diagnostics and personalized medicine. The Company is supported by private investors and grant funding from genomics programs at federal agencies, including the NIH and NIST-ATP. www.BioNanoGenomics.com
